

NOMINAL COVERAGE, OPERATIONAL ERASURE

2023-24 OCR/CRDC Proof Packet

Heterosexual children, sexual-orientation reporting, and cyberbullying

CORE PROOF

OCR expressly includes heterosexual students within sexual-orientation harassment and directs schools to report qualifying cyberbullying. The CRDC then preserves only an aggregate sexual-orientation allegation count, while omitting sexual-orientation victim counts, sexual-orientation discipline counts, heterosexual status, the cyber medium, and an incident-level link among allegation, victim, and outcome.

Prepared from the user-provided official 2023-24 CRDC forms, modules, data-element list, flat-file specification, and Excel templates.

Evidence extraction date: July 12, 2026

Document Control

Scope lock

This packet proves the architecture of the OCR-administered 2023-24 Civil Rights Data Collection. It does not claim that every district lacks additional local fields, and it does not substitute CRDC reporting for the full OCR complaint process. Its proof object is narrower and concrete: what the federal CRDC defines, requires, collects, separates, and fails to preserve.

Primary source set

ID	Source	Location	Use
S1	2023-24 CRDC School Form (PDF)	pp. 112-120	Definition, HIBS allegation table, victim tables, discipline tables
S2	Harassment or Bullying - School Level (HIBS) Module (PDF)	pp. 1-6	Reporting rules, scenarios, cyber/off-campus FAQs, classification rule
S3	2023-24 CRDC LEA Form (PDF)	pp. 15-16	Required policy and policy-link reporting for sexual orientation, gender identity, religion
S4	Harassment or Bullying - LEA Level (HIBD) Module (PDF)	pp. 1-3	Definitions and required 2023-24 "other categories" policy fields
S5	2023-24 List of CRDC Data Elements (PDF)	p. 5	Closed summary of allegation, victim, discipline, and policy categories
S6	2023-24 CRDC Flat File Specifications (XLSX)	School Elements rows 2053-2252	Exact element names and field families
S7	2023-24 CRDC School Form Excel Template (XLSX)	HIBS data-entry and consolidated sheets	Operational template headings and element name SCH_HBALLEGATIONS_ORI
S8	2023-24 CRDC LEA Form Excel Template (XLSX)	HIBD data-entry and consolidated sheets	Operational policy indicator and URL fields for sexual orientation

Method

- Compared the narrative definitions and instructions against the closed list of CRDC HIBS tables.
- Compared the PDF forms against the flat-file element names and both Excel templates.
- Searched the School Elements sheet for the exact field families SCH_HBALLEGATIONS_*, SCH_HBREPORTED_*, and SCH_HBDISCIPLINED_*.
- Treated absence as proof only where the source enumerates the complete HIBS table set or the closed HIBS element block.
- Separated what the sources expressly establish from the narrower inferences the architecture supports.

Contents

- Appendix A. Exact field-family inventory
- Appendix B. Source-integrity hashes
- Appendix C. Completeness cross-check

1. Executive Finding

Finding

The 2023-24 CRDC expressly recognizes heterosexual students within sexual-orientation harassment and expressly directs schools to report qualifying cyberbullying. Yet the HIBS architecture does not preserve heterosexual victim status, a sexual-orientation victim count, a sexual-orientation discipline count, the cyber medium, or a link between the sexual-orientation allegation and any particular victim or disciplinary outcome.

The proof chain

Step	Proof
1. Covered on paper	Sexual-orientation harassment expressly includes a student identified or perceived as gay, lesbian, bisexual, or heterosexual. [S1 p.112; S4 p.2]
2. Cyber conduct is included	Definitions include graphic or written statements using cell phones or the Internet. [S1 p.112; S4 p.2]
3. Cyberbullying must be reported	OCR's HIBS resource says teasing/cyberbullying should be reported and includes incidents at home, by phone, social media, SMS, or school devices. [S2 pp.4-5]
4. Sexual orientation reaches one federal field	The flat file requires SCH_HBALLEGATIONS_ORI, an aggregate number of sexual-orientation allegations. [S6 row 2054]
5. Victim and discipline reporting drops the basis	Student-victim and disciplined-student tables exist only for sex, race/color/national origin, and disability. [S1 pp.117-120; S5 p.5; S6 rows 2073-2252]
6. The actual status is not preserved	Classification is based on the alleged harasser's likely motive, not the victim's actual status. [S1 p.113; S2 p.2]
7. The cyber medium is not preserved	The CRDC says it does not specify place or medium, and the HIBS element set contains no cyber, platform, device, or medium field. [S2 p.5; S6 rows 2053-2252]
8. Allegation and outcome are not linked	The HIBS module expressly says the CRDC does not assume a relationship between allegation and discipline elements. [S2 p.2]

Controlling sentence

Nominal Coverage, Operational Erasure

The federal system names the heterosexual child in the definition, receives the event as an aggregate sexual-orientation allegation, and removes the child's heterosexual status, the sexual-orientation victim pathway, the cyber medium, and the measurable outcome before the data can show whether protection occurred.

Why this is not a paperwork-error claim

The same architecture appears consistently across the School Form, HIBS resource module, List of Data Elements, Flat File Specifications, and School Excel Template. The LEA Form and LEA Excel Template also require separate sexual-orientation policy reporting. The contradiction is therefore not a single missing checkbox in one district document. It is a repeated federal design choice: policy and aggregate allegation visibility without victim-status and outcome visibility.

2. The Complete Contradiction

Federal promise/instruction	What is preserved	What becomes unreadable
Coverage definition	Heterosexual is expressly inside sexual orientation.	No heterosexual field exists anywhere in HIBS.
Protected basis	Sexual orientation has its own required allegation count.	The count combines heterosexuality, homosexuality, bisexuality, perceived status, and other sexual-orientation motives.
Victim recognition	OCR says all students reported as harassed should be counted by civil-rights category.	There is no sexual-orientation victim table; the victim can appear only in the broader sex table.
Disciplinary response	OCR says disciplined students should be counted by civil-rights category.	There is no sexual-orientation discipline table; any discipline can appear only in the broader sex table.
Cyber coverage	Cell phones, Internet, social media, SMS, school devices, home, and off-campus conduct are reportable.	No cyber/medium/platform/device/location field remains in the HIBS data.
Status evidence	Actual or perceived heterosexuality is covered.	Classification uses likely motive, not actual victim status; actual heterosexual status is not collected.
Linkage	Allegation, alleged victim, and discipline can all be reported.	Counts are separate; CRDC does not assume they are related.
Policy oversight	LEAs must report whether they have a sexual-orientation policy and provide its link.	CRDC cannot show how many heterosexual children invoked it or what happened to their cases.
Data integrity	All allegations count, whether founded or unfounded.	The aggregate count cannot show substantiation, protective action, or corrective outcome.
Comparability	Discipline is reportable.	Each LEA may define discipline as it deems appropriate, limiting standardized outcome comparison.

Operational result

What the public record can say

A school reported N sexual-orientation allegations.

What the public record cannot say

How many alleged victims were heterosexual; whether the sexual-orientation allegation was cyberbullying; whether the alleged victim received protection; whether any discipline was tied to that allegation; whether the report was routed as heterosexual-status harm; or whether repeated heterosexual-child reports formed a pattern.

3. Paper Coverage: Heterosexual Children Are Expressly Included

3.1 Express definition

The School Form defines sexual-orientation harassment as harmful conduct based on actual or perceived sexual orientation and expressly includes a student who identifies as or is perceived to be “gay, lesbian, bisexual, or heterosexual.” The LEA-level resource repeats the same definition. [S1 p.112; S4 p.2]

3.2 Sexual orientation is also nested inside sex

The School Form defines sex-based harassment to include sexual orientation, gender identity, sex characteristics, sex stereotypes, and pregnancy. HIBS-1 then instructs that sexual-orientation allegations are a subset of sex-based allegations and must also be included in the sex allegation row. [S1 pp.112, 114]

Double-entry rule

A qualifying sexual-orientation allegation is counted once in SCH_HBALLEGATIONS_ORI and also in SCH_HBALLEGATIONS_SEX. This confirms recognition at the allegation layer, but it does not create a sexual-orientation victim or outcome layer.

3.3 Actual status is not required for coverage

Coverage attaches to actual or perceived sexual orientation. A heterosexual child therefore does not need to prove that the harasser correctly understood the child’s orientation. The motive classification can rest on perceived heterosexuality. [S1 p.112]

3.4 But actual heterosexual status is not preserved

The same instructions direct data submitters to classify allegations and cases by the alleged harasser’s likely motive, “not the actual status of the alleged victim.” [S1 p.113; S2 p.2] This makes the sexual-orientation allegation count a motive-based aggregate, not a victim-orientation dataset.

3.5 LEA policy reporting is separately operationalized

For 2023-24, HIBD-4, HIBD-5, and HIBD-6 are required. LEAs must separately report whether a written policy prohibits harassment based on sexual orientation, whether a web link exists, and the link itself. [S3 pp.15-16; S4 p.1]

Capacity proof

OCR can require a separate sexual-orientation policy indicator and URL at the LEA level. The missing sexual-orientation victim and outcome fields are therefore not explained by an inability to name or separately operationalize the category.

4. Cyberbullying Is Expressly Reportable

4.1 The definition includes digital conduct

The School Form states that harassment may include graphic and written statements using cell phones or the Internet. The same digital language appears in the sex, sexual-orientation, gender-identity, race/national-origin, disability, and religion definitions. [S1 pp.112-113]

4.2 The HIBS resource expressly says to report cyberbullying

Digital scope	Official instruction
Teasing and cyberbullying	The FAQ answers yes: teasing or cyberbullying should be reported when it fits a listed civil-rights basis. [S2 p.4]
Home and off-campus conduct	The FAQ says reportable conduct may occur at home or outside school, including harassment by phone while a student is at home or walking home. [S2 p.5]
Social media and SMS	The FAQ expressly lists social media and SMS during school hours or on a school-issued device. [S2 p.5]
Place and medium	OCR states that CRDC does not specify the place or medium in which harassment or bullying occurs. [S2 p.5]
Remote platforms and timing	The School Form includes remote-learning platforms and conduct before, during, or after normal school hours or school activities. [S1 p.113]

4.3 The medium is intentionally absorbed, not separately retained

The HIBS collection asks whether the conduct was based on a civil-rights category. It does not ask whether the event occurred by phone, Internet, social media, SMS, remote platform, school device, personal device, or in person. The flat-file specification contains no HIBS cyber, device, platform, medium, or location element. [S2 p.5; S6 rows 2053-2252]

Cyber contradiction

OCR instructs schools to include cyberbullying in the HIBS count, then deliberately declines to specify the place or medium. Cyberbullying can enter the aggregate allegation count, but the fact that it was cyberbullying disappears from the federal dataset.

4.4 Consequence for heterosexual children

A heterosexual child targeted through digital conduct may produce a sexual-orientation allegation. But CRDC cannot later isolate the child as heterosexual, identify the event as cyberbullying, count the child in a sexual-orientation victim table, or tie any disciplinary response to that allegation. The two proof dimensions the user is testing - heterosexual status and cyber medium - are both absorbed before outcome measurement.

5. The HIBS Reporting Architecture

5.1 The complete School Form table set

Table	Object	Basis retained
HIBS-1	Allegations	Sex; sexual orientation; gender identity; race/color/national origin; disability; religion
HIBS-2	Allegations by religion type	14 religion subtypes
HIBS-3	Students reported as harassed or bullied	Sex only
HIBS-4	Students reported as harassed or bullied	Race/color/national origin only
HIBS-5	Students reported as harassed or bullied	Disability only
HIBS-6	Students disciplined	Sex only
HIBS-7	Students disciplined	Race/color/national origin only
HIBS-8	Students disciplined	Disability only

5.2 The omission is visible in the table of contents itself

The School Form's contents list HIBS-3 through HIBS-8 only for sex, race/color/national origin, and disability. It contains no "Students Reported" or "Students Disciplined" table for sexual orientation, gender identity, or religion. [S1 contents and pp.117-120]

5.3 The List of Data Elements confirms the closed category split

The federal summary lists allegations for six bases: sex, sexual orientation, gender identity, race/color/national origin, disability, and religion. The immediately following victim and discipline bullets list only three: sex, race/color/national origin, and disability. [S5 p.5]

5.4 The School Excel Template repeats the same structure

The School Excel Template contains SCH_HBALLEGATIONS_ORI and headings for sexual-orientation allegations. Its student-victim headings are limited to Sex; Race, Color, or National Origin; and Disability. Its discipline headings are limited to the same three bases. [S7]

Cross-format replication

The same category drop occurs in the PDF form, resource module, data-element summary, flat-file specification, and operational Excel template. This is a system architecture, not a local form anomaly.

6. The Exact Flat-File Proof

6.1 Allegation fields preserve sexual orientation

Row	Item	Element name	Object
2053	HIBS-1.1	SCH_HBALLEGATIONS_SEX	Number of sex-based allegations
2054	HIBS-1.2	SCH_HBALLEGATIONS_ORI	Number of sexual-orientation allegations
2055	HIBS-1.3	SCH_HBALLEGATIONS_GEN	Number of gender-identity allegations
2056	HIBS-1.4	SCH_HBALLEGATIONS_RAC	Number of race/color/national-origin allegations
2057	HIBS-1.5	SCH_HBALLEGATIONS_DIS	Number of disability allegations
2058	HIBS-1.6	SCH_HBALLEGATIONS_REL	Number of religion allegations

6.2 Victim fields retain only three bases

Rows	Item	Field family	Result
2073-2102	HIBS-3	SCH_HBREPORTED_SEX_*	30 disaggregated victim-count fields for sex
2103-2132	HIBS-4	SCH_HBREPORTED_RAC_*	30 disaggregated victim-count fields for race/color/national origin
2133-2162	HIBS-5	SCH_HBREPORTED_DIS_*	30 disaggregated victim-count fields for disability
No rows	None	SCH_HBREPORTED_ORI_*	No sexual-orientation victim field
No rows	None	SCH_HBREPORTED_GEN_*	No gender-identity victim field
No rows	None	SCH_HBREPORTED_REL_*	No religion victim field

6.3 Discipline fields retain only three bases

Rows	Item	Field family	Result
2163-2192	HIBS-6	SCH_HBDISCIPLINED_SEX_*	30 disaggregated discipline-count fields for sex
2193-2222	HIBS-7	SCH_HBDISCIPLINED_RAC_*	30 disaggregated discipline-count fields for race/color/national origin
2223-2252	HIBS-8	SCH_HBDISCIPLINED_DIS_*	30 disaggregated discipline-count fields for disability
No rows	None	SCH_HBDISCIPLINED_ORI_*	No sexual-orientation discipline field
No rows	None	SCH_HBDISCIPLINED_GEN_*	No gender-identity discipline field
No rows	None	SCH_HBDISCIPLINED_REL_*	No religion discipline field

6.4 Exact negative search result

SCH_HBALLEGATIONS_ORI -> present once (School Elements!H2054)
 SCH_HBREPORTED_ORI* -> zero elements
 SCH_HBDISCIPLINED_ORI* -> zero elements
 "cyber" within flat specification -> zero matches
 HIBS victim table families -> SEX, RAC, DIS only

Flat-file conclusion

Sexual orientation is operational at the aggregate allegation layer and absent at the victim and discipline layers. Cyberbullying is included by instruction but absent as a retained field. The data architecture itself performs the erasure.

7. How the Child and Cyber Pathway Disappear

7.1 Heterosexual identity collapses into a mixed motive count

SCH_HBALLEGATIONS_ORI combines all sexual-orientation motives. It does not distinguish heterosexual, gay, lesbian, bisexual, perceived orientation, or other orientation. Because submitters classify likely motive rather than actual victim status, the field cannot be treated as a count of LGBTQ victims or heterosexual victims. It is only a count of allegations classified as sexual-orientation motivated.

7.2 One allegation is not one child

HIBS-1 instructs schools to count an allegation involving more than one student only once. Therefore, the sexual-orientation allegation total cannot be used to infer the number of alleged victims. [S1 p.113]

7.3 The child can reappear only inside the broader sex table

Because sexual orientation is treated as a subset of sex, a student reported as harassed may be counted in HIBS-3 as a student harassed “on the basis of sex.” But that table does not preserve that the motive was sexual orientation, much less heterosexuality. The child is visible as male/female/nonbinary and demographic subgroups, while the sexual-orientation basis disappears.

7.4 The discipline can also reappear only inside the broader sex table

A disciplined student may be counted in HIBS-6 as disciplined for sex-based harassment. The field does not preserve that the underlying allegation was based on sexual orientation. It therefore cannot answer whether a sexual-orientation allegation produced discipline.

7.5 Cyberbullying collapses into the basis count

A phone, Internet, social-media, SMS, remote-platform, or school-device incident is reported under the relevant civil-rights basis. No HIBS field distinguishes the medium afterward. The same aggregate count mixes in-person and cyber conduct.

7.6 The two erasures compound

Stage	What happens
Reported event	Heterosexual student targeted through social media or phone
Classification	Likely motive coded as sexual orientation; actual victim status not retained
Federal allegation field	SCH_HBALLEGATIONS_ORI increases by one; SCH_HBALLEGATIONS_SEX also increases
Victim count	Student may appear in SCH_HBREPORTED_SEX_*; sexual-orientation basis is gone
Cyber fact	No medium field; cyber fact is gone
Discipline	Any disciplined student may appear in SCH_HBDISCIPLINED_SEX_*; allegation linkage is gone
Public result	No federal answer to whether a heterosexual cyberbullying victim was protected or whether a response followed

8. Additional Fragmentation and Non-Linkage Rules

8.1 CRDC expressly disclaims linkage between allegation and discipline elements

The HIBS resource states that allegations reported and students disciplined “may be related,” but the CRDC does not assume a relationship between those elements. [S2 p.2] This is direct proof that aggregate counts cannot establish case-level response.

8.2 Allegation, victim, and disciplined student may be recorded at different schools

The FAQ directs that the allegation be reported at the school where the incident occurred, the alleged victim at the school the student attends, and the disciplined student at the school the disciplined student attends. [S2 p.4] Cross-school events can therefore be split across reporting units.

8.3 All allegations count whether founded or unfounded

The system requires all allegations to be tallied with or without proof. It similarly counts students reported as harassed and students disciplined regardless of whether allegations were founded or unfounded. [S2 pp.2, 4] The fields are reporting counts, not a standardized merits or protection determination.

8.4 “Discipline” is locally variable

Although CRDC generally identifies common discipline types, the HIBS module permits each LEA to define discipline as it deems appropriate. [S2 p.2] A discipline count therefore does not supply a nationally uniform response measure.

8.5 Zero and blank values mean different things

The School Form instructs LEAs to report zero only when the information was collected and the amount is zero; a blank is used when the LEA does not know, does not collect, or the item does not apply. [S1 p.112] Missingness can therefore reflect noncollection rather than an absence of incidents.

Fragmentation result

Even before reaching the missing sexual-orientation victim and outcome fields, the CRDC separates incident location, victim school, disciplined-student school, allegation status, and locally defined discipline. The architecture cannot reconstruct a heterosexual-child cyberbullying case from aggregate public fields.

9. What the Federal Data Can and Cannot Answer

Capacity	Question answered
Can answer	Whether an LEA reports having a written sexual-orientation harassment/bullying policy.
Can answer	Whether the LEA supplies a web link to that policy.
Can answer	How many sexual-orientation-motivated allegations a school reports in aggregate.
Can answer	How many students are reported as harassed under the broader sex category, disaggregated by listed demographics.
Can answer	How many students are disciplined under the broader sex category, subject to local discipline definitions.

Limit	Question left unreadable
Cannot answer	How many alleged victims were heterosexual.
Cannot answer	How many alleged victims were gay, lesbian, bisexual, or perceived to have any particular orientation.
Cannot answer	Whether the sexual-orientation allegation involved one child or multiple children.
Cannot answer	Whether the event was cyberbullying, in-person conduct, or both.
Cannot answer	Which platform, device, or medium was involved.
Cannot answer	Whether a particular sexual-orientation allegation produced a victim record.
Cannot answer	Whether a particular sexual-orientation allegation produced discipline.
Cannot answer	Whether a heterosexual child received supportive, corrective, or Title IX-related protection.
Cannot answer	Whether repeated heterosexual-child cyberbullying reports formed a pattern.
Cannot answer	Whether apparent absence of cases means zero cases or noncollection where blanks are allowed.
Cannot answer	Whether different LEA discipline counts represent equivalent responses.

The precise proof statement

Use this sentence

OCR/CRDC expressly covers actual or perceived heterosexuality and directs schools to report qualifying cyberbullying, but the 2023-24 reporting architecture retains only a mixed sexual-orientation allegation count. It provides no heterosexual victim field, no sexual-orientation victim or discipline field, no cyber-medium field, and no case-level linkage showing protection or outcome.

10. Controlled Conclusions and Limits

10.1 Conclusions established by the source set

- Heterosexual children are expressly included in the CRDC definition of sexual-orientation harassment.
- Sexual-orientation harassment is treated as a subset of sex-based harassment for allegation counting.
- Qualifying cyberbullying is expressly reportable, including specified conduct by phone, Internet, social media, SMS, and outside school.
- The federal HIBS data separately collect sexual-orientation allegations.
- The federal HIBS data do not separately collect sexual-orientation victims or sexual-orientation discipline.
- The federal HIBS data do not collect actual heterosexual victim status.
- The federal HIBS data do not preserve the cyber medium.
- The federal HIBS data do not establish a relationship between an allegation and a discipline count.
- LEA policy and policy-link fields demonstrate that sexual orientation can be separately named and operationalized when OCR chooses to require it.

10.2 Conclusions the packet does not overstate

- This packet does not prove that heterosexual children lack legal coverage; it proves that coverage is not operationally measurable in the identified CRDC outcome fields.
- This packet does not prove that districts never record sexual orientation or cyber medium locally; it proves the federal CRDC cannot reveal whether they do.
- This packet does not prove that every sexual-orientation allegation concerns an LGBTQ child; the field is expressly broad enough to include heterosexuality and perceived orientation.
- This packet does not prove that no protection or discipline occurred in a particular case; it proves the CRDC cannot link or measure that result by heterosexual status, sexual-orientation basis, and cyber medium.
- This packet does not equate CRDC data collection with the entire OCR complaint or Title IX system. It establishes the OCR-administered federal reporting layer.

10.3 Evidentiary significance

The architecture can support a targeted records request or district-level comparison. The next layer should ask what local intake form, SIS/PowerSchool incident code, Title IX referral rule, cyberbullying form, or civil-rights database supplies the fields omitted by CRDC. If the local layer also lacks them, the combined proof becomes: federal paper coverage, federal aggregate intake, and no operational local or federal route capable of preserving the heterosexual child, cyber medium, and outcome together.

Appendix A. Exact Field-Family Inventory

A.1 HIBS allegation layer

Element/family	Status	Meaning
SCH_HBALLEGATIONS_SEX	Present	Aggregate allegation
SCH_HBALLEGATIONS_ORI	Present	Aggregate allegation; mixed sexual-orientation motives
SCH_HBALLEGATIONS_GEN	Present	Aggregate allegation
SCH_HBALLEGATIONS_RAC	Present	Aggregate allegation
SCH_HBALLEGATIONS_DIS	Present	Aggregate allegation
SCH_HBALLEGATIONS_REL	Present	Aggregate allegation plus 14 religion subtype fields

A.2 HIBS victim layer

Element/family	Status	Meaning
SCH_HBREPORTED_SEX_*	Present (30 fields)	Victim counts by demographic disaggregation
SCH_HBREPORTED_RAC_*	Present (30 fields)	Victim counts by demographic disaggregation
SCH_HBREPORTED_DIS_*	Present (30 fields)	Victim counts by demographic disaggregation
SCH_HBREPORTED_ORI_*	Absent	No sexual-orientation victim count
SCH_HBREPORTED_GEN_*	Absent	No gender-identity victim count
SCH_HBREPORTED_REL_*	Absent	No religion victim count

A.3 HIBS discipline layer

Element/family	Status	Meaning
SCH_HBDISCIPLINED_SEX_*	Present (30 fields)	Discipline counts by demographic disaggregation
SCH_HBDISCIPLINED_RAC_*	Present (30 fields)	Discipline counts by demographic disaggregation
SCH_HBDISCIPLINED_DIS_*	Present (30 fields)	Discipline counts by demographic disaggregation
SCH_HBDISCIPLINED_ORI_*	Absent	No sexual-orientation discipline count
SCH_HBDISCIPLINED_GEN_*	Absent	No gender-identity discipline count
SCH_HBDISCIPLINED_REL_*	Absent	No religion discipline count

A.4 Cyber-medium layer

Object	Status	Effect
Cyberbullying instruction	Present	Schools are directed to report qualifying cyberbullying
Cell phone / Internet definition	Present	Digital conduct is within harassment definitions
Social media / SMS FAQ	Present	Specific reportable examples
Home / outside school FAQ	Present	Specific reportable examples

Object	Status	Effect
Cyber/platform/device/medium HIBS field	Absent	Digital method not retained as a data dimension
Case linkage field	Absent from HIBS table set	No federal incident-level link among allegation, victim, and discipline

A.5 Policy layer

Item	Status	Function
HIBD-4	Required 2023-24	Separate policy indicator for sexual orientation, gender identity, religion
HIBD-5	Required 2023-24	Separate policy web-link indicator
HIBD-6	Required 2023-24	Separate policy web link
LEA Excel Template	Present	Operational data-entry fields mirror the PDF form

Appendix B. Source-Integrity Hashes

SHA-256 values were calculated from the extracted source files used for this packet. They allow later verification that the reviewed files have not changed.

Appendix C. Completeness Cross-Check

This checklist is included to prevent the proof from being reduced to a single missing checkbox.

Status	Proof point
Included	Heterosexual expressly named in the sexual-orientation definition
Included	Actual or perceived sexual orientation
Included	Sexual orientation nested inside sex and double-counted at allegation layer
Included	Cell phone and Internet in definitions
Included	Teasing/cyberbullying reporting instruction
Included	Home/outside-school/phone example
Included	Social media/SMS/school-device example
Included	CRDC does not specify place or medium
Included	Aggregate SCH_HBALLEGATIONS_ORI field
Included	No heterosexual-specific field
Included	No SCH_HBREPORTED_ORI field family
Included	No SCH_HBDISCIPLINED_ORI field family
Included	Victim tables only for sex, race, disability
Included	Discipline tables only for sex, race, disability
Included	Actual victim status not used for classification
Included	One allegation may involve multiple children
Included	Allegation and discipline elements not assumed related
Included	Allegation, victim, and discipline may be split across schools
Included	All allegations count whether founded or unfounded
Included	LEA discretion to define discipline
Included	Zero versus blank/noncollection distinction
Included	Required LEA sexual-orientation policy indicator and URL
Included	Replication across PDFs, flat file, and Excel templates
Included	Limits: CRDC layer only; no claim that all districts lack local fields
Included	Limits: inability to measure is not proof that no individual protection occurred

Final hard lock

The contradiction

Heterosexual children are covered on paper. Cyberbullying is reportable on paper. Sexual orientation reaches an aggregate allegation field. But the 2023-24 OCR/CRDC architecture does not retain heterosexual victim status, a sexual-orientation victim or discipline pathway, the cyber medium, or a case-level outcome link. The coverage exists; the child's protected pathway is not federally measurable.
