

EXHIBIT B — INSTITUTIONAL RESPONSE PATTERN

INSERT — SFUSD RECORD CONFIRMATION (LOCKED)

Institution: San Francisco Unified School District (SFUSD)

Date: March 23, 2026

Department: Legal / Public Records (CPRA Response)

● Request (Scope of Inquiry)

Request for confirmation of whether SFUSD has conducted:

- written safety models related to student exposure to sexualized digital environments
 - sex-differentiated impact analyses regarding reputational or social harm risks
 - adolescent neurodevelopment risk assessments related to reward-driven digital environments
 - documented outcome or lifecycle impact studies relevant to student participation pathways
-

Institutional Response (Verbatim Position — Summarized)

SFUSD stated that:

- it does not maintain responsive records
 - it does not prepare, own, or use records containing the requested information
 - fulfilling the request would require creation of new analysis, which is outside CPRA scope
-

Confirmed Condition

No existing documentation was identified reflecting:

- safety modeling
- sex-differentiated risk analysis

- neurodevelopment-based risk assessment
 - outcome or lifecycle impact evaluation
-

Structural Interpretation

This response establishes:

- absence of formal risk modeling
 - absence of outcome-based evaluation
 - absence of structured analytical frameworks
-

Relevance to Framework

This aligns with:

- absence of structured pre-entry risk frameworks
 - failure to operationalize known risks
 - lack of institutional safety modeling
-

Functional Effect

Where:

- risks are historically known
- exposure pathways are present
- and no formal modeling or analysis exists

→ students are not provided with:

- usable risk frameworks
 - outcome awareness
 - timing advantage prior to exposure
-

Evidentiary Value

This response:

- confirms absence of institutional safety modeling
 - demonstrates non-existence of structured outcome analysis
 - supports classification of entry conditions as unprotected at the institutional level
-

Cross-Exhibit Link

Consistent with:

- Exhibit A (Platform Omission)
- Exhibit C (Participant Outcome Evidence)
- Exhibit D (Historical Continuity)

→ Institutional absence corresponds with predictable downstream outcomes

INSERT — CPS REQUEST (UNANSWERED / PENDING RECORD)

Institution: Chicago Public Schools (CPS)

Date: April 2, 2026

Department: Compliance / General Inquiry

Request (Scope of Inquiry)

Request for confirmation of whether CPS has conducted:

- written safety models related to student exposure to validation-driven or monetized digital environments
 - sex-differentiated impact analyses regarding reputational or social harm risks
 - adolescent neurodevelopment risk assessments related to reward-driven digital environments
 - documented outcome or lifecycle impact studies relevant to student participation pathways
 - structured outcome data used to inform student-facing guidance
 - formal risk disclosure frameworks translating known risks into decision-usable information

Request included record condition:

- if materials exist → provide
 - if not → confirm absence for the record
-

Institutional Response (Verbatim Position — Summarized)

- No response received as of current record
 - No confirmation of existence or absence of requested materials
-

Confirmed Condition

No documentation has been provided reflecting:

- safety modeling
 - sex-differentiated risk analysis
 - neurodevelopment-based risk assessment
 - outcome or lifecycle impact evaluation
-

Structural Interpretation

This response pattern establishes:

- absence of confirmed safety modeling
 - absence of confirmed outcome-based evaluation
 - lack of institutional clarification under record conditions
-

Relevance to Framework

This aligns with:

- institutional non-response to safety and risk inquiries
 - absence of structured pre-entry risk frameworks
-

Functional Effect

Where:

- risks are historically known
- exposure pathways are present
- and institutional response is absent

→ students are not provided with:

- usable risk frameworks
 - outcome awareness
 - timing advantage prior to exposure
-

Evidentiary Value

This record:

- documents absence of response under record conditions
 - supports classification of institutional non-response as part of a broader pattern
-

Cross-Exhibit Link

Consistent with:

- Exhibit A (Platform Omission)
 - Exhibit C (Participant Outcome Evidence)
 - Exhibit D (Historical Continuity)
-

INSERT — DALLAS ISD RECORD ACKNOWLEDGMENT

Institution: Dallas Independent School District (DISD)

Date: March 27, 2026

Department: Office of Legal Services / Public Information Request

Request (Scope of Inquiry)

Request for documentation regarding:

- safety modeling
 - sex-differentiated impact analyses
 - adolescent neurodevelopment risk assessments
 - outcome or lifecycle impact data
 - structured risk disclosure frameworks
-

Institutional Response (Verbatim Position — Summarized)

DISD stated that:

- the request has been received and logged
 - it will be forwarded to relevant departments
 - response depends on existing records
 - the Public Information Act does not require:
 - creation of new information
 - legal analysis
 - answering questions
-

Confirmed Condition

- No confirmation of existence of requested materials
 - No documentation provided at this stage
 - Explicit limitation that new analysis will not be created
-

Structural Interpretation

This response establishes:

- reliance on procedural intake
- dependency on pre-existing records
- structural limitation on creation of safety modeling

Relevance to Framework

This aligns with:

- absence of pre-existing safety modeling frameworks
 - reliance on record existence rather than risk presence
-

Functional Effect

Where:

- risks are historically known
- exposure pathways are present
- and analysis is not created if absent

→ students are not provided with:

- safety models
 - updated risk frameworks
 - decision-usable disclosures
-

Evidentiary Value

This record:

- confirms procedural handling without substantive analysis
 - supports classification of institutional response as non-generative
-

Cross-Exhibit Link

Consistent with:

- Exhibit A (Platform Omission)
- Exhibit C (Participant Outcome Evidence)
- Exhibit D (Historical Continuity)

INSERT — SEATTLE PUBLIC SCHOOLS REQUEST (PENDING RECORD)

Institution: Seattle Public Schools

Date: March 30, 2026

Department: Public Affairs / Superintendent Office

Request (Scope of Inquiry)

Request for confirmation of whether the district maintains any written analysis, model, or framework addressing:

- instructional alignment with adolescent developmental capacity versus adult decision assumptions
 - application of behavioral science models (reward sensitivity, peer influence, risk evaluation)
 - interpretation of internal protective signals versus socially induced stigma
 - instructional framing and its influence on participation decisions
 - outcome distribution and representational accuracy
 - credibility filtering based on visibility, validation, or desirability
 - sex-differentiated impact analysis related to reputational persistence and social outcomes

Request includes record condition:

- if materials exist → provide
 - if not → confirm absence for the record
-

Institutional Response (Verbatim Position — Summarized)

- No response received as of current record
 - No confirmation of existence or absence of requested materials
-

Confirmed Condition

No documentation has been provided reflecting:

- safety modeling
 - sex-differentiated risk analysis
 - neurodevelopment-based risk assessment
 - outcome or lifecycle impact evaluation
-

Structural Interpretation

This response pattern establishes:

- absence of confirmed safety modeling
 - absence of confirmed outcome-based evaluation
 - lack of institutional clarification under record conditions
-

Relevance to Framework

This aligns with:

- institutional non-response to safety and risk inquiries
 - absence of structured pre-entry risk frameworks
-

Functional Effect

Where:

- risks are historically known
- exposure pathways are present
- and institutional response is absent

→ students are not provided with:

- usable risk frameworks
 - outcome awareness
 - timing advantage prior to exposure
-

Evidentiary Value

This record:

- documents absence of response under record conditions
 - supports classification of institutional non-response as part of a broader pattern
-

Cross-Exhibit Link

Consistent with:

- Exhibit A (Platform Omission)
 - Exhibit C (Participant Outcome Evidence)
 - Exhibit D (Historical Continuity)
-

Conclusion (Locked)

Across institutions:

- absence is confirmed (SFUSD)
- response is absent (CPS)
- process substitutes for analysis (DISD)
- response is absent (Seattle Public Schools)

Where foreseeable risk exists and safety modeling is not produced, institutional response patterns demonstrate a structural gap in pre-entry protection conditions.
