

Correct Structural Order

1. Neutrality Model Collapse
 - 0a. Protective Signal Disqualification
2. Neutrality Drift Not Accepted
3. Capacity Proven → Why No Equivalent Upstream Literacy?
4. Male Future Benefit Is Not Sufficient
5. Historically Known Harm Pathway Locked
6. Empowerment Claims Require Burden Integrity
7. Pre-Harm Developmental Literacy > Post-Harm Drift
8. Building Block Inequality
9. First-Stage Classification Is Trajectory Governance
10. **PRINCIPLE #32 — POWER PREFERENCE IS NOT SELF-JUSTIFYING**
- 11.
- 12.
13. Explanation ≠ Justification
14. Selective Autonomy Is Reviewable
15. Plain Language Preservation
16. Translation Integrity After Foreseeability
17. Coordinated Worldview Construction Disparity
18. Pre-Equalization Burden Is Reviewable
19. Earliest Governing Failure Controls
20. Stronger Pathway Availability Presumption
21. Reliable Status / Leverage Loss Requires Structural Review
22. Burden Shift Without Justification Is Reviewable
23. Category Precision Controls Protective Access
24. Review Timing Is Structural
25. Continuity Preservation Is Not Neutrality
26. Comparator Disparity Creates Justification Burden
27. Demand Is Not Presumed Neutral
28. Developmental Condition Is Governing, Not Background
29. Reward Dominance Before Evaluation
30. Interpretive Dependence Is Structural
31. Status Sensitivity Is Developmentally Material
32. Peer Reinforcement Is Developmental Architecture
33. Developmental Conditions Cannot Be Selectively Invoked
34. Absence of Reward-Loop Literacy Is Reviewable
35. Pre-Incident Governance Priority / Anti-Post-Harm Drift

Correct Chain

known distorted baseline

- capacity to build worldview proven
- weaker building blocks for girls
- stronger pathway available
- category precision controls access
- burden shifts downstream
- review timing matters
- demand/reward/peer/status conditions govern
- first classification governs trajectory
- disparity must be justified

Tightest Master Lock

Known harm

- proven capacity
 - weaker developmental architecture
 - reward-dominant conditions
 - weaker classification pathway
 - burden shifted to child
 - neutrality broken
- = justify disparity.
