

Public Record of Harm Signals, Stopping Authority, Continuation Decisions, and Preserved Benefits

Corrected allocation: K-12 and sexual reward-loop actors remain inside the control, benefit, notice, and stopping chain.

The public record shows repeated moments when adult-controlled institutions could recognize child-facing harm, use a practical stop within their own authority, preserve the signal, and disclose the risk. The decisive question is not whether one actor controlled the entire commercial system. It is whether each actor used the stopping authority it actually possessed when continuation preserved engagement, growth, reputation, payment access, sexual-market demand, or downstream remedial funding.

WHAT THIS LEDGER DOES	WHAT THIS LEDGER REFUSES TO DO
Identifies the date, signal, relevant controller, available stop, recorded continuation or response, preserved benefit, and proof status.	It does not turn K-12 into a passive receiver, require total market control, call intervention cessation, or make a child prove a population-level stop opportunity.

Prepared by Stacey Kahns-Gray

July 15, 2026 | Corrected edition

This is a public-record ledger, not legal advice or a final adjudication of liability.

Governing allocation

Two actor groups remain inside the proof object: (1) public schools and K-12 systems, and (2) sexual reward-loop market actors. Social-media platforms are a delivery, measurement, growth, and monetization layer where the record supports that role; they are not the complete external cause.

1. Relevant control, not total control

A stop command attaches to the lever an actor actually controls. Platform actors control design, prompts, ranking, age gates, recommendation, monetization, and disclosure. Adult sexual-market actors control adult-content reachability, search and category access, measurement, monetization, payment relationships, and exclusion choices. K-12 controls compulsory access conditions, devices, networks, procurement, curriculum, permissions, observation, record preservation, first-node classification, notification, aggregation, and withdrawal within school authority. No actor needs control over the full system before its own stopping duty becomes visible.

2. K-12 has a dual role

K-12 can receive classroom disruption and institutional cost while also having exercised control at entry, during observation, and at classification. Its later injury does not erase its earlier authority. A district therefore cannot be grouped with children and families as merely a passive downstream receiver.

3. The sexual reward-loop branch cannot be omitted

The pathway does not end at generic social-media disruption. Child-reachable adult sexual machinery, commercially measured participation, reward-loop demand formation, sexualized supply conversion, NoFap and other recovery populations, and later school or treatment receivers belong to one actor-chain analysis. Illegal-content enforcement is one stop signal; it is not the whole adult-market proof object.

4. Receiver activation is not cessation

Litigation, counseling, monitoring, moderation, mental-health services, and fifteen-year plans may perform real downstream functions. They do not count as activation of the upstream stop unless they bind access, design, reachability, monetization, disclosure, and non-substitution. Funding the receiver while preserving the sender is remedy substitution.

Locked sentence: The institution endorsed or maintained the pathway at entry, erased that role at consequence, and assigned the reconstruction burden to the child. The corrected ledger does not repeat that transfer.

Starting rule and ledger findings

A stop-command entry requires: (1) a recognizable harm or adverse return signal; (2) an adult-controlled actor with authority over a relevant lever; and (3) a practical stopping option within that authority. Direct receipt by a named decision-maker, exact dollar value, personal motive, and total system control are separately labeled proof questions. Their absence does not erase a documented signal-control-benefit conflict.

Finding	Corrected reading
Earliest demand-side return anchor	NoFap's 2011 origin statement records an organized unwanted-use and recovery population. Firm-specific receipt remains a notice question; the aggregate return signal remains part of the pathway.
Earliest direct platform knowledge	Snap's May 2012 corporate account of high-school students using the product throughout class.
Earliest named teacher warning	Tracie Schroeder's May 1, 2014 public report. The teacher signal matters because K-12 possessed an aggregation and escalation function beyond one classroom.
Clearest school-hour stop conflict	Plaintiffs' 2025 filing says TikTok declined default school-hour notification limits because they threatened business metrics and daily active users.
Clearest sexualized monetization bridge	Project Meramec connects school-aged users, sexualized livestreaming, adult viewers, virtual gifts, platform data, and alleged platform profit.
Clearest adult-content stop conflict	The FTC alleges meaningful Aylo action followed payment-processor threats and that removals met internal resistance. This enforcement record does not reduce the broader adult-market question to illegal content alone.
Clearest K-12 receiver activation	Seattle sought product changes and resources while expressly disavowing elimination. That activated litigation and the institutional damages receiver, not the complete upstream stop.

Proof-status legend

A	Direct public record	Official corporate, district, organizational, or contemporaneous public statement.
B	Court order	A ruling whose procedural and merits scope controls.
C	Government complaint	Government allegations unless admitted, stipulated, or adjudicated.
D	Litigant discovery filing	A party's account of discovery; detailed but disputed unless admitted or found.
E	Stated inference	A structural inference kept separate from the underlying record.

1. 2011 | Public demand-side return: NoFap

A - direct record

HARM SIGNAL

NoFap states that its 2011 forum evolved when participants recognized struggles with pornography addiction and other compulsive sexual behavior.

RELEVANT CONTROL

The public return signal was held by a recovery community after the pathway had already become unwanted. Adult-content operators controlled child exclusion and product reachability; K-12 controlled school access and first-node preservation within its own systems. Direct 2011 receipt by a named company or district is not established.

AVAILABLE STOP

Treat the aggregate return as an adverse signal; prevent child access; preserve exposure-pathway data; examine commercial measurement; and stop requiring every affected person to recreate the pathway individually.

RECORDED CONTINUATION OR RESPONSE

No systemwide child non-access response tied to this signal is identified in the reviewed record. The absence of named receipt limits a defendant-specific actual-notice claim; it does not convert the return population into no signal at all.

BENEFIT PRESERVED OR SOUGHT

Continued audience acquisition, traffic, category growth, and demand measurement are structurally relevant benefits. Attribution to a particular firm from this 2011 record alone remains discovery-dependent.

PROOF BOUNDARY

This proves an early organized demand-side return signal, not prevalence, causation for every participant, or actual notice to a specific defendant.

Sources: S1; F1; F2

2. May 2012 | Snap: direct knowledge of classroom use

C - gov. complaint

HARM SIGNAL

A Snap corporate post said the company was thrilled that most surveyed users were high-school students using Snapchat to pass notes in class and send behind-the-back photographs of teachers throughout the day.

RELEVANT CONTROL

Snap controlled product design and school-hour optimization. K-12 controlled devices, networks, classroom rules, preservation, escalation, and demands directed to the platform. These are independent and overlapping controls.

AVAILABLE STOP

Snap: stop treating school penetration as growth, end school-hour prompts, and warn schools. K-12: aggregate the signal, block and withdraw access within its authority, preserve records, and demand product-level cessation.

RECORDED CONTINUATION OR RESPONSE

The Nevada Attorney General alleges Snap made young-user frequency and time spent a central goal and continued school-focused growth. The reviewed record does not show a coordinated K-12 aggregate stop at this point.

BENEFIT PRESERVED OR SOUGHT

Young-user frequency, time spent, network growth, and school penetration.

PROOF BOUNDARY

The corporate statement is direct; the later strategy characterization is an unadjudicated state allegation. This is the earliest direct platform-knowledge anchor located, not necessarily the first signal anywhere.

Sources: S2

3. May 1-2, 2014 | Named teacher signal: Tracie Schroeder

A - direct record

HARM SIGNAL

Schroeder publicly reported that, in sixteen years of teaching, nothing had disrupted her classroom more than the Snapchat update; students could not stay away, and one crawled under a table with a phone.

RELEVANT CONTROL

The teacher controlled immediate classroom enforcement. School and district leadership controlled aggregation, blocking, preservation, procurement and escalation. Snap controlled the feature and its school-hour engagement design.

AVAILABLE STOP

Confiscate and block immediately; preserve and aggregate the event institutionally; notify platform leadership and other districts; demand feature withdrawal or default school-hour disabling.

RECORDED CONTINUATION OR RESPONSE

The teacher confiscated phones and contemporaneous reporting noted a school block. Later filings allege Snap continued school marketing and declined school-hour restrictions. The record reviewed does not show the teacher signal becoming a complete district-to-market stop command.

BENEFIT PRESERVED OR SOUGHT

The school absorbed enforcement labor; Snap retained engagement and growth potential.

PROOF BOUNDARY

A direct causal link between this warning and later corporate decisions is not established. The absence of that link does not erase the school-side preservation and escalation opportunity.

Sources: S2; S3; S6

4. 2017-2018 | Meta: school penetration converted into growth

D - litigant filing

HARM SIGNAL

The 2024 order recounts allegations that high-penetration 'FB High Schools' produced 22 percent more time spent and that Meta used the formulation 'Winning Teens = Winning High Schools.'

RELEVANT CONTROL

Meta product, growth, and leadership personnel controlled acquisition and engagement. School-family organizations and K-12 channels controlled institutional access, endorsement context, procurement relationships, and disclosure within their spheres.

AVAILABLE STOP

Stop school-by-school acquisition and school-hour engagement; disclose adverse internal research; prohibit paid institutional trust channels from functioning as child-market access; preserve school-side agreements and outcomes.

RECORDED CONTINUATION OR RESPONSE

Plaintiffs' 2025 filing says Meta paid the National PTA \$110,000 and Scholastic \$135,000 in 2018 and used school and family channels to expand reach.

BENEFIT PRESERVED OR SOUGHT

Teen monthly active users, time spent, access to school-family trust channels, and institutional legitimacy.

PROOF BOUNDARY

The order confirms what was pleaded and allowed some claims to proceed; it did not adjudicate every allegation. Payment figures come from plaintiffs' discovery filing.

Sources: S4; S6

5. 2020-2021 | TikTok: internal compulsive-use and school signal

C - gov. complaint

HARM SIGNAL

California alleges that a 2021 internal report shared with Boston Children's Hospital's Digital Wellness Lab found compulsive TikTok use rampant. Other internal material described interference with school, sleep, and productivity.

RELEVANT CONTROL

TikTok research, product, Trust and Safety, policy, and leadership controlled product safeguards and disclosure. K-12 independently controlled school-hour access, device administration, observation, aggregation, and institutional response.

AVAILABLE STOP

Default school-hour and bedtime restrictions; effective time limits; age assurance; publication of adverse findings; school warnings; K-12 aggregation and access withdrawal within school control.

RECORDED CONTINUATION OR RESPONSE

The 2024 order recounts TikTok's statement that it was prepared to implement changes if needed, while later filings say school-hour notifications continued when restrictions threatened daily-active-user metrics.

BENEFIT PRESERVED OR SOUGHT

Daily active users, retention, time spent, advertiser trust, user loyalty, and brand stability.

PROOF BOUNDARY

California's complaint and plaintiffs' filing state allegations based on cited internal material; the motion-to-dismiss order is not a merits verdict.

Sources: S4; S5; S6

6. October 26, 2021 onward | Named TikTok public representatives

C - gov. complaint

HARM SIGNAL

California's complaint identifies Michael Beckerman as testifying that TikTok shared responsibility with parents. It identifies CEO Shou Chew and Senior Director of Public Policy Eric Ebenstein in later messaging about time-management tools.

RELEVANT CONTROL

TikTok policy leadership controlled public representations and escalation; product leadership controlled defaults and tests. Parents and schools were asked to carry operational enforcement without equivalent product control.

AVAILABLE STOP

Publish whether tools materially reduce use; make effective protections default; disclose adverse tests; retain corporate responsibility instead of transferring the daily stopping burden downstream.

RECORDED CONTINUATION OR RESPONSE

California alleges TikTok publicly promoted controls while internal evidence described some tools as useful talking points but not altogether effective.

BENEFIT PRESERVED OR SOUGHT

Reputation, regulatory defense, parent trust, and continued engagement while presenting safety activity.

PROOF BOUNDARY

Naming a spokesperson proves a representation, not personal control over every product decision or personal liability. Institutional representations and product results remain distinct proof objects.

Sources: S5

7. Before 2021 through 2025 filing | TikTok: school-hour notification stop

D - litigant filing

HARM SIGNAL

Plaintiffs say TikTok teams recognized that nighttime and school-hour notifications harmed sleep and academic performance and considered default restrictions.

RELEVANT CONTROL

TikTok product and Trust and Safety teams controlled notification defaults. Schools controlled devices, networks, local alerts, documentation, and demands for a platform stop.

AVAILABLE STOP

Disable notifications during ordinary school hours by default; make override adult-controlled; warn schools; require K-12 to preserve and aggregate continuing school-hour interference.

RECORDED CONTINUATION OR RESPONSE

Plaintiffs state TikTok declined because limits would harm business metrics and daily active users; one employee allegedly said the only reason was priority.

BENEFIT PRESERVED OR SOUGHT

Daily active users, retention, session frequency, and notification-driven return.

PROOF BOUNDARY

This is a clear alleged signal-control-benefit conflict, but it remains plaintiffs' summary of discovery unless admitted or found.

Sources: S6

8. Early 2022 | TikTok LIVE: Project Meramec

D - litigant filing

HARM SIGNAL

Plaintiffs say Project Meramec found school-aged and under-13 users livestreaming sexual or suggestive acts for adult viewers and virtual gifts convertible to money, with grooming and exploitation reflected in TikTok data.

RELEVANT CONTROL

TikTok LIVE, gifting, age-gate, Trust and Safety, and senior leadership controlled the monetized pathway. K-12 controlled school-device access, school-hour observation, incident preservation, classification, and escalation where the conduct touched schools.

AVAILABLE STOP

Suspend minors from LIVE and gifting; close age-gate bypasses; disable adult-to-minor monetization; disclose the risk; require K-12 to preserve the market pathway rather than recode the output only as individual misconduct.

RECORDED CONTINUATION OR RESPONSE

Plaintiffs state the project lead fought for months, senior leaders knew, leadership refused to act, and public warning followed press exposure rather than the internal stop request.

BENEFIT PRESERVED OR SOUGHT

LIVE engagement and virtual-gift revenue. Plaintiffs allege platform profit; the public filing does not provide a verified dollar amount for this cohort.

PROOF BOUNDARY

This is the strongest located bridge between school-aged users, sexualized conduct, adult demand, platform data, and monetization. It is a litigant discovery account, not a final finding.

Sources: S6

9. 2022 | TikTok Now: pre-launch classroom warning

D - litigant filing

HARM SIGNAL

Plaintiffs state Trust and Safety warned that synchronized prompts would disrupt classrooms, schools and teachers would hate it, and minors already had smartphone addiction in class.

RELEVANT CONTROL

TikTok product and Trust and Safety personnel controlled launch conditions. K-12 controlled contemporaneous school-hour evidence and institutional demands once the feature reached classrooms.

AVAILABLE STOP

Restrict the feature to adults; prevent school-hour prompts; delay launch; aggregate post-launch school data and demand withdrawal.

RECORDED CONTINUATION OR RESPONSE

Plaintiffs say the recommendation was rejected because attraction to users under eighteen was the point and business growth was considered even with lower safety; post-launch data allegedly showed substantial school-hour posting by ages 13-17.

BENEFIT PRESERVED OR SOUGHT

Competitive growth against BeReal, under-18 adoption, and synchronized engagement.

PROOF BOUNDARY

This presents the filing's account of internal documents and does not independently establish the intent of every TikTok employee.

Sources: S6

10. July 2022-March 2023 | TikTok: safety tool measured against retention

C - gov. complaint

HARM SIGNAL

California alleges leadership imposed guardrails so safety tools would not materially reduce use. Product Manager Lead Jiajia Li wrote that the goal was not to reduce time spent but to contribute to daily active users and retention.

RELEVANT CONTROL

TikTok product leadership controlled tool design, success metrics, testing, and public claims. K-12 could compare claimed protection against observed school-hour outcomes and preserve the mismatch.

AVAILABLE STOP

Measure success by material reduction in excessive minor use; make limits binding and adult-controlled; publish outcome metrics; withdraw tools that function mainly as safety branding.

RECORDED CONTINUATION OR RESPONSE

California alleges a March 2023 test reduced average teen time only from about 108.7 to 107.1 minutes per day while the tool was promoted publicly.

BENEFIT PRESERVED OR SOUGHT

Daily active users, retention, and public confidence without a large reduction in time spent.

PROOF BOUNDARY

The statements and test result appear in a government complaint and remain unadjudicated.

Sources: S5

11. January 6, 2023 | Seattle Public Schools: institutional receiver activation

A - direct record

HARM SIGNAL

Seattle Public Schools publicly aggregated platform-related student harm, operational disruption, and increased mental-health costs and filed suit.

RELEVANT CONTROL

Seattle controlled procurement, networks, curriculum, preservation, school records, and the scope of the relief it sought. Platform defendants controlled product design and monetization. The district could activate litigation without thereby activating every available stop.

AVAILABLE STOP

Demand enforceable product cessation, child non-access, disclosure, and preservation; use district-controlled access and procurement levers; prevent damages or service funding from substituting for withdrawal.

RECORDED CONTINUATION OR RESPONSE

SPS expressly said its goal was not to eliminate social media. It sought changes to harmful practices and additional resources for student mental-health needs. The suit created adversarial and discovery pressure, but the district's own statement withheld elimination as the remedy object.

BENEFIT PRESERVED OR SOUGHT

Institutional recovery, funded services, product reform, and litigation viability. Counsel is paid from recovery on contingency; no recovery is established by this source.

PROOF BOUNDARY

This is institutional damages-receiver activation and partial product-pressure activation. It is not complete upstream stop-command activation because cessation was expressly disavowed. That classification concerns remedy structure, not personal motive.

Sources: S7

12. October 24, 2024 | Federal court: school claims allowed in part

B - court order

HARM SIGNAL

The court summarized allegations of deliberate youth-directed design, school-hour access, school targeting, operational disruption, and diverted resources.

RELEVANT CONTROL

The court controlled pleading-stage claim viability. Platforms retained product controls and defenses. Districts controlled their factual theory, records, discovery requests, and requested remedy architecture.

AVAILABLE STOP

Use the record to test product design, school targeting, warnings, time-of-day controls, sexualized monetization, school authorization, and the omitted sexual reward-loop actor chain without beginning from an individual child's diagnosis.

RECORDED CONTINUATION OR RESPONSE

The court granted in part and denied in part the motion to dismiss, allowing much of the negligence theory to proceed while limiting claims under Section 230, the First Amendment, and intervening-cause rules.

BENEFIT PRESERVED OR SOUGHT

Districts obtained legal viability and discovery access; defendants retained defenses and claim limits. No damages were awarded by this order.

PROOF BOUNDARY

This is a procedural legal ruling, not a finding that every pleaded fact is true or that any defendant is liable. It recognizes an institutional claim while leaving the complete child-pathway theory adjudicated.

Sources: S4

13. 2012-2020; FTC filing in 2025 | Aylo/Pornhub: adult-market stop conflict

C - gov. complaint

HARM SIGNAL

The FTC alleges Aylo distributed large quantities of child sexual abuse material and nonconsensual material; internal compliance described Pornhub as a goldmine for rape content, and teams resisted removals.

RELEVANT CONTROL

Aylo entities controlled tube-site rules, upload systems, categories, search, removals, monetization, cross-site termination, age-gate choices, and payment relationships. Payment processors controlled access to financial rails. Schools separately controlled school-device and network reachability.

AVAILABLE STOP

Remove and prevent re-upload; verify performers and consent; terminate uploaders across sites; report as required; prove effective child exclusion before exposure; stop monetizing suspect material; preserve demand and reachability data.

RECORDED CONTINUATION OR RESPONSE

The FTC alleges meaningful action began only after Visa and Mastercard threatened termination and massive fines in early 2020, and compliance efforts were sometimes ignored or overruled.

BENEFIT PRESERVED OR SOUGHT

Content volume, competitive position, traffic, paid-site revenue, and payment access. One internal email allegedly said removing problematic videos hurts the company when competitors allow them.

PROOF BOUNDARY

The complaint allegations were resolved by stipulated order without general admission. This entry proves a documented adult-market control and payment conflict. It does not confine the broader sexual reward-loop inquiry to illegal material; child reachability, demand formation, and market-research use remain separate proof objects.

Sources: S8; F1; F2; F4

14. November 21, 2025 filing | School-district MDL: fifteen-year receiver plan

D - litigant filing

HARM SIGNAL

Plaintiffs argue platform harms pervade schools and support district-led plans extending fifteen years, including services for students who may never have used a platform.

RELEVANT CONTROL

Districts and their experts control the institutional damages model, market-research reconstruction, claimed costs, and proposed intervention architecture. Platforms control upstream product levers. The court controls any award or abatement order.

AVAILABLE STOP

Pair any recovery with enforceable product cessation, child non-access, disclosure, school-side preservation, adult sexual-market non-access, and non-substitution. Intervention spending cannot count as use of the stopping lever.

RECORDED CONTINUATION OR RESPONSE

The districts seek future damages and abatement guided by Dr. Hoover's strategic plans and Dr. Leslie's cost analyses, including monitoring and mental-health services.

BENEFIT PRESERVED OR SOUGHT

Claimed institutional recovery, funded monitoring, service contracts, expert plans, and long-term remedial administration.

PROOF BOUNDARY

The plans may purchase services actually used by students. That fact does not answer the structural question. Without enforceable cessation, the filing activates an institutional receiver and future-cost claim while leaving the upstream pathway available.

Sources: S6; F3

Money and benefit ledger

Amounts are labeled by transaction type. A payment is not proof of wrongdoing; a claimed cost is not an award; and an unquantified commercial benefit is not converted into a dollar figure. The legal and structural importance lies in who controlled a stopping lever, what the stop threatened, and which benefit continuation preserved.

Record	Amount or benefit	Proof status
Meta to National PTA (2018)	\$110,000; part alleged to come from marketing	Plaintiffs' discovery filing; not a court finding
Meta to Scholastic (2018)	\$135,000 for school/family outreach materials	Plaintiffs' discovery filing; not a court finding
TikTok notification restriction	Daily active users and business metrics preserved	Benefit named in plaintiffs' filing; no dollar amount
TikTok LIVE / virtual gifts	Virtual gifts convertible to money; alleged platform profit	Plaintiffs' filing; cohort dollars not public in reviewed text
Aylo removal resistance	Traffic, content volume, competitive position, and payment access	FTC allegation; no ledger dollar amount
Seattle litigation	Damages and resources sought; counsel paid from recovery	Official district statement; no award established
Breathitt monitoring	\$47,468 Hapara; \$725 Eduspire; \$2,222 Securly	Percent-attributed claimed compensation
Tucson services	\$33,582 Awareity; \$231,021 Talkspace	40 percent compensation claimed
Irvington vendors	\$325,147; \$624,917; \$226,467; \$19,770; \$58,160; \$146,136; \$66,086	20 percent compensation claimed; vendor totals listed

What remains unquantified

The reviewed filings do not expose a verified dollar value for school-hour notifications, the TikTok LIVE minor cohort, the full fifteen-year district plans, the aggregate NoFap return signal, or the value of child-reachable adult-market demand. The ledger records the benefit type and refuses to invent a number. Unquantified does not mean structurally absent.

The strongest monetary evidence is the revealed choice architecture: a stop threatened daily active users, competitive position, institutional reach, payment access, adult-market traffic, or recoverable program costs; an adult-controlled decision then determined whether that stop would operate.

Structural, legal, and moral reading

Structurally

The recurring pattern is not a simple platform-sender and school-receiver relationship. It is a distributed control chain. Market actors control reachability, design, measurement, recommendation, categories, monetization, payment relationships, and disclosure. K-12 controls compulsory access conditions, institutional endorsement, devices, networks, observation, records, first-node classification, aggregation, and withdrawal within school authority. Children and families carry the least control and the greatest reconstruction burden. Later, districts and vendors can price the institutional output through litigation and intervention.

The common mechanism is continuation across partial controls. Each actor can point to the control held elsewhere, while retaining the benefit attached to its own lever. Requiring one actor to control the whole chain guarantees non-activation. The correct test is whether each relevant controller used the stop it possessed.

Legally

The 2024 MDL order permits substantial school negligence theories to proceed but does not decide liability. Government complaints and the 2025 discovery filing support investigation, custodian identification, document demands, notice theories, control analysis, impeachment, and contradictions, subject to their procedural status. Direct actual notice, duty, causation, fraud, conspiracy, RICO, damages, and personal liability each require their own elements and proof. Those requirements must not be imported backward to erase a structural stop opportunity or to demand total market control where relevant control is enough for the question being tested.

Seattle's filing is legally significant, but the remedy classification must remain exact: it activated claims, discovery pressure, and an institutional damages receiver. Because Seattle expressly disavowed elimination, it did not by that act establish upstream cessation. Likewise, a fifteen-year service plan may support damages or abatement evidence without proving that the exposure pathway was stopped.

Morally and philosophically

Once adults can recognize compulsive classroom use, school interference, sexualized monetization, child-reachable adult machinery, or an organized recovery population, the burden belongs first to the adults controlling access, design, classification, money, and disclosure. A child should not have to generate more injury, disclose more intimate facts, or complete more intervention paperwork before those adults use the stop already available to them.

Bottom line: K-12 cannot reserve aggregate recognition for its own monetary claim while denying the aggregate child pathway; market actors cannot use commercially measured participation as consent to the endpoint; and intervention funding cannot substitute for cessation. Bind the stopping lever first.

Correction audit

This edition makes the following substantive repairs to the prior version.

Prior defect	Corrected rule
Schools grouped with families as passive receivers	K-12 is a dual-role actor: controller at entry, observation and classification; receiver at institutional consequence.
Seattle called real upstream activation	Seattle is classified as institutional damages-receiver activation and partial product-pressure activation, not cessation.
Full commercial-system control treated as the control threshold	Relevant control governs: each actor is tested against the stopping lever it actually possessed.
Adult sexual-market proof narrowed to illegal content	Illegal-content enforcement remains one signal; child reachability, demand formation, market research, category control, and recovery returns remain inside the broader proof object.
NoFap isolated as a notice-deficient anecdote	NoFap remains an organized aggregate demand-side return signal. Firm-specific receipt is labeled separately and does not erase the signal.
Services described without a non-substitution rule	Services may be real and used; they do not count as upstream stopping activity unless coupled to enforceable cessation and child non-access.
Proof caveats repeatedly neutralized the inference	Proof labels protect accuracy. They do not change actor identity, reallocate control, or turn unquantified benefit into no benefit.

Correction standard: evidentiary caution must narrow the legal proposition to what the source supports. It must never be used to move a controlling institution outside the actor chain, to convert receiver funding into prevention, or to return the proof burden to the child.

Source index

Source type controls weight. Page references in the entries follow the underlying public records as described in the prior edition.
